PHASE 2 – REQUIREMENT ANALYSIS

2.1 Functional Requirements

The system shall:

1. Create users and custom roles.
2. Assign appropriate roles to users.
3. Create the **Institution Details** table.
4. Store student information.
5. Create records for different branches.
6. Restrict READ operations.
7. Restrict CREATE operations.
8. Restrict WRITE operations.
9. Restrict DELETE operations.
10. Allow administrators full access.
11. Test access using ServiceNow impersonation.

2.2 Non-Functional Requirements

- **Security** – Prevent unauthorized record access.
- **Reliability** – ACL rules should work consistently.
- **Maintainability** – Scripts should be easy to understand and modify.
- **Usability** – Authorized users should access permitted records easily.
- **Scalability** – The design should support additional users and records.
- **Data Privacy** – Student information should be protected.
- **Access Control** – Permissions should depend on roles and configured rules.

2.3 Software Requirements

- ServiceNow Personal Developer Instance
- Modern Web Browser
- Internet Connection

2.4 Hardware Requirements

- Laptop/Desktop Computer
- Minimum 4 GB RAM
- Stable Internet Connection

2.5 User Roles

User/Role	Permission
bb1	READ
bb2	CREATE
bb3	WRITE

User/Role	Permission
bb4	DELETE
Admin	Full Access

2.6 Data Requirements

The table contains:

- Student Roll Number
- Student Name
- Faculty Name
- Branch
- Email
- Phone Number
- Description
