PHASE 6 – PROJECT TESTING

6.1 Testing Objective

The objective is to verify that the configured ACLs correctly enforce READ, CREATE, WRITE, and DELETE permissions.

6.2 Test Cases

Test Case	User/Role	Operation	Expected Result
TC01	Admin	READ	All records accessible
TC02	bb1	READ	Authorized EEE records accessible
TC03	No required role	READ	Access denied
TC04	bb2	CREATE	Create operation available
TC05	bb3	WRITE	Edit operation available
TC06	bb4	DELETE	Delete operation available

6.3 READ Testing

Impersonate the authorized user and open the **Institution Details** list.

Verify that the user can access the permitted EEE records and cannot access unauthorized records.

6.4 CREATE Testing

Impersonate a user with the `bb2` role and test whether a new record can be created.

6.5 WRITE Testing

Impersonate a user with the `bb3` role and test whether an existing record can be modified.

6.6 DELETE Testing

Impersonate a user with the `bb4` role and test whether an existing record can be deleted.

6.7 Administrator Testing

Verify that the administrator has full access to the records and operations.

6.8 Test Result

The ACL configuration demonstrates role-based control over **READ, CREATE, WRITE, and DELETE** operations.
