PHASE 7 – PROJECT DOCUMENTATION

7.1 Project Overview

This project demonstrates how **Script-Controlled ACLs in ServiceNow** can protect student records from unauthorized access by combining custom roles, branch values, and scripted ACL logic.

7.2 Technologies Used

- ServiceNow
- JavaScript
- ACL
- User Roles
- Custom Tables

7.3 Security Model

Role	Permission
bb1	READ
bb2	CREATE
bb3	WRITE
bb4	DELETE
Admin	Full Access

7.4 Benefits

- Protects sensitive student information.
- Prevents unauthorized access.
- Provides role-based security.
- Controls record operations.
- Improves data security.
- Provides controlled access based on field values.

7.5 Limitations

- Correct role configuration is required.
- Incorrect ACL configuration may affect access.
- Users must be assigned appropriate roles.
- Script logic must be maintained when requirements change.

7.6 Future Enhancements

- Department-based access control

- Dynamic role assignment
- Advanced field-level security
- Automated security testing
- Audit and monitoring
- External identity integration

7.7 Conclusion

The project demonstrates the implementation of **Script-Controlled ACLs in ServiceNow** to provide secure record-level access control. The system uses user roles, branch values, and ACL rules to control READ, CREATE, WRITE, and DELETE operations.
