PHASE 8 – PROJECT DEMONSTRATION

8.1 Project Introduction

Project: Script-Controlled ACL – Restrict Record Access Based on Field Value

The project demonstrates secure record-level access control using ServiceNow ACLs.

8.2 Purpose

The main purpose is to prevent unauthorized users from accessing, creating, modifying, or deleting restricted student records.

8.3 Demonstration Flow

During the demonstration, show the following in order:

1. Login to ServiceNow.
2. Show the created users.
3. Show the custom roles.
4. Show the `u_institution_details` table.
5. Show ECE, EEE, and CSE records.
6. Demonstrate the READ ACL.
7. Demonstrate the CREATE ACL.
8. Demonstrate the WRITE ACL.
9. Demonstrate the DELETE ACL.
10. Demonstrate Administrator full access.
11. Use **Impersonate User** to verify authorized and unauthorized access.

8.4 Final Output

The final system demonstrates controlled access to ServiceNow records based on **user roles, branch values, and configured ACL rules**.

8.5 Project Benefits

- Improved record security
- Controlled user permissions
- Reduced unauthorized access
- Role-based authorization
- Secure student data management

8.6 Final Conclusion

The project successfully demonstrates how Script-Controlled ACLs can be implemented in ServiceNow to control record access and operations based on user roles and configured field values.
